

ProfUZ
LAPIS

Global Business Processes and Information Management System

- Reduces implementation time
- Significantly saves costs
- Ensures no vendor dependencies

Profuz
LAPIS

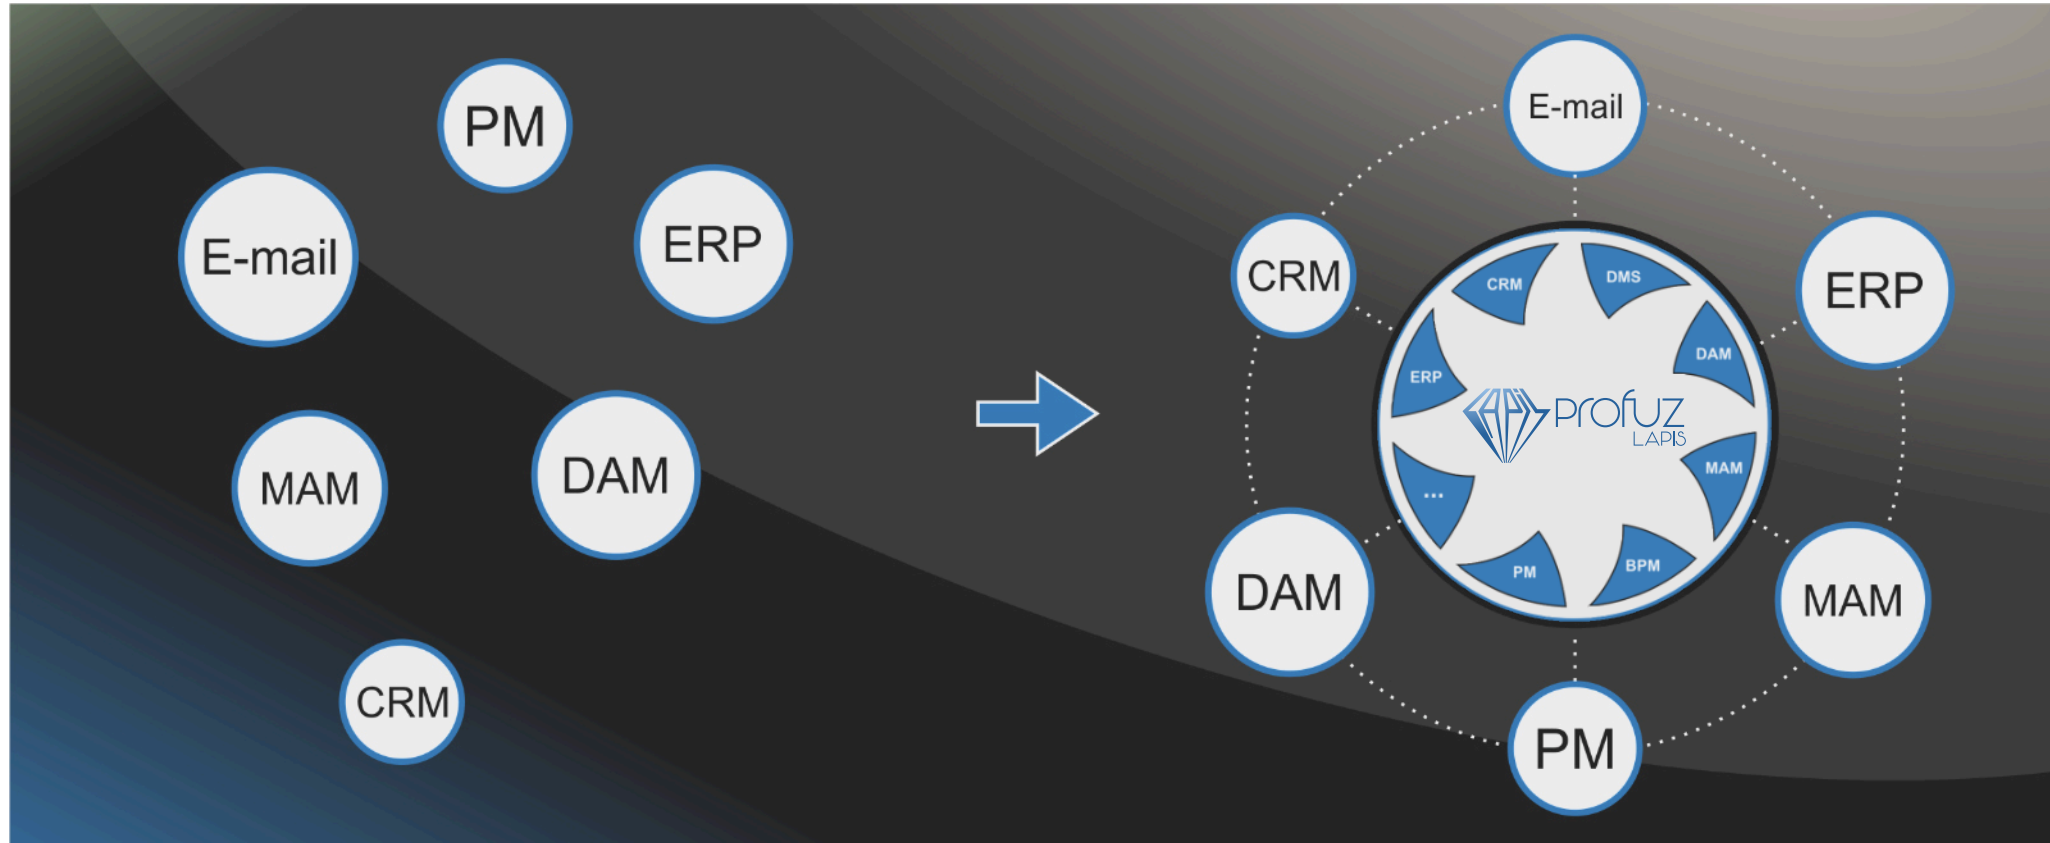

LAPIS

Limitless **A**dvanced **P**owerful **I**ntelligent **S**ystem

What LAPIS does?

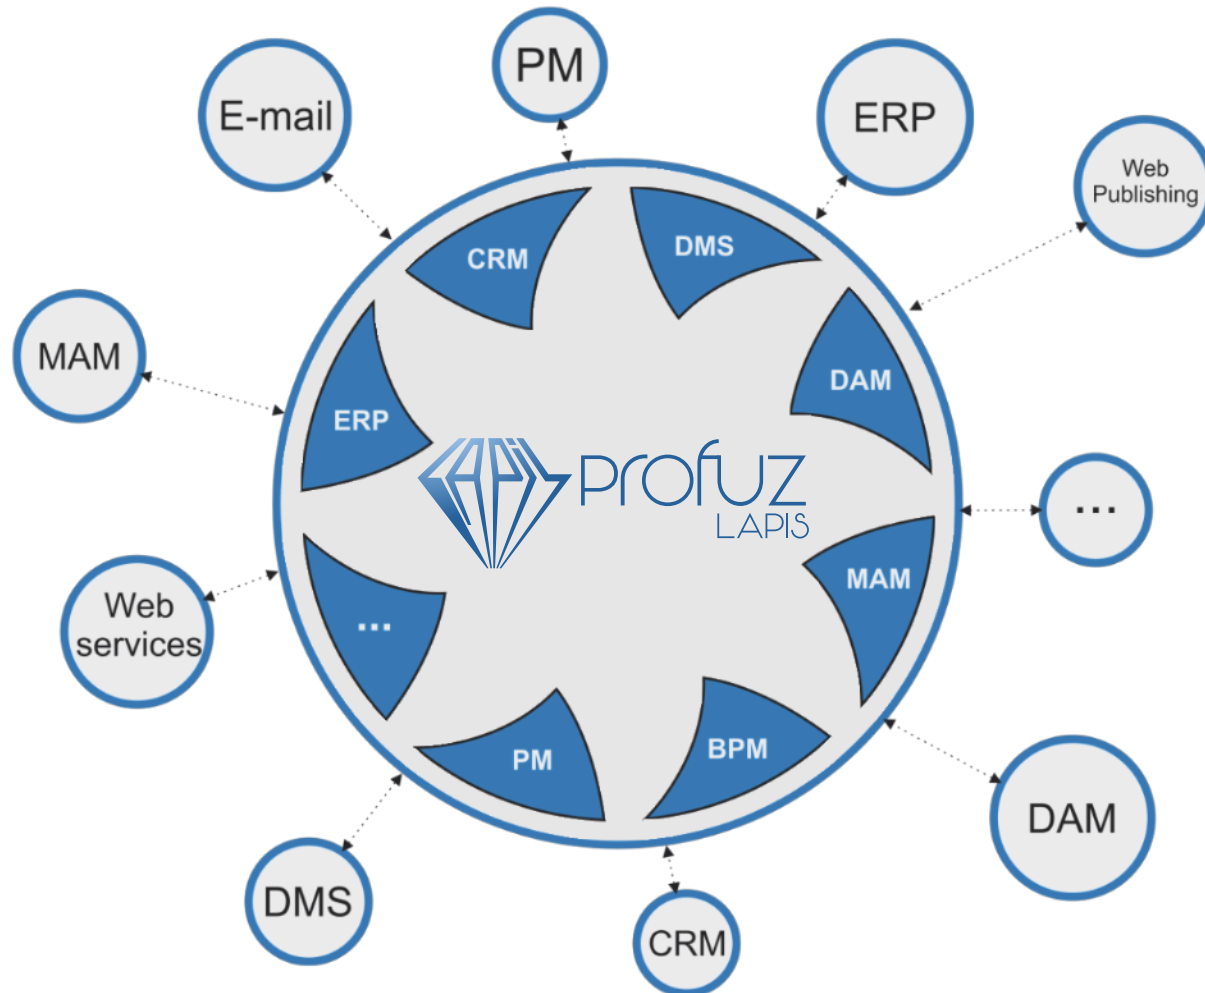

Creates single environment to run and grow your business

- ✓ Accurate cross-system on-demand reports in real time
- ✓ Improves data security and access
- ✓ Improves efficiency, productivity and quality of work

What LAPIS does?

Adds functionality to the existing environment

✓ Seamless infrastructure improvement without loss of information and staff resistance

✓ Scalable modular system

✓ Minimize the human factor risks

Core Functionalities

Customization

Create custom UI, workflows, data structures and integrations to comply with your business specifics.

Database-agnostic

LAPIS can work with any vendor's database management system.

Progressive Web Application

Access the system on any device with a standards-compliant browser, including desktop and mobile devices.

Core Functionalities

Intelligent search mechanism

Parallel search in all connected internal and external systems with live result updates and live collaboration for search sessions.

Live Collaboration

Every element in the System can be edited, reviewed, discussed, approved, shared or otherwise managed collaboratively through the Live Collaboration feature.

Real Time Communication Tools

Chats, comments, emails. Use built-in and external communication channels.

Core Functionalities

Contacts Management

Organize and track interactions with potential or existing clients, partners, suppliers, agents and other contacts.

Project and Task Management

From simple tasks to complex project management.

Document management

Secure document storage, online multi-user editing, custom document workflows and metadata.

Additional Functionalities

Commercial Management

Increase business efficiency and profit by managing all activities – financial, supply, manufacturing, operations etc.

Digital/Media Asset Management

Automate, manage, organize, search, share your digital content in an intelligent way without the unnecessary transfer of large files.

Workflow management

Design, build, run flexible business processes. Both industry-specific built-in automated workflows and user-definable workflows. Use internal and external operations or monitoring and statistics to trigger actions.

Additional Functionalities

News Management

Streamline your news workflow: from planning to publishing, create, edit, and schedule articles, manage multimedia news data, and categorize content efficiently.

Localization Services Management

Managing timed-text, dubbing and localization jobs and teams providing an ultra-secure and super-fast private workspace, tools and workflows for ensuring quality.

Human Resources

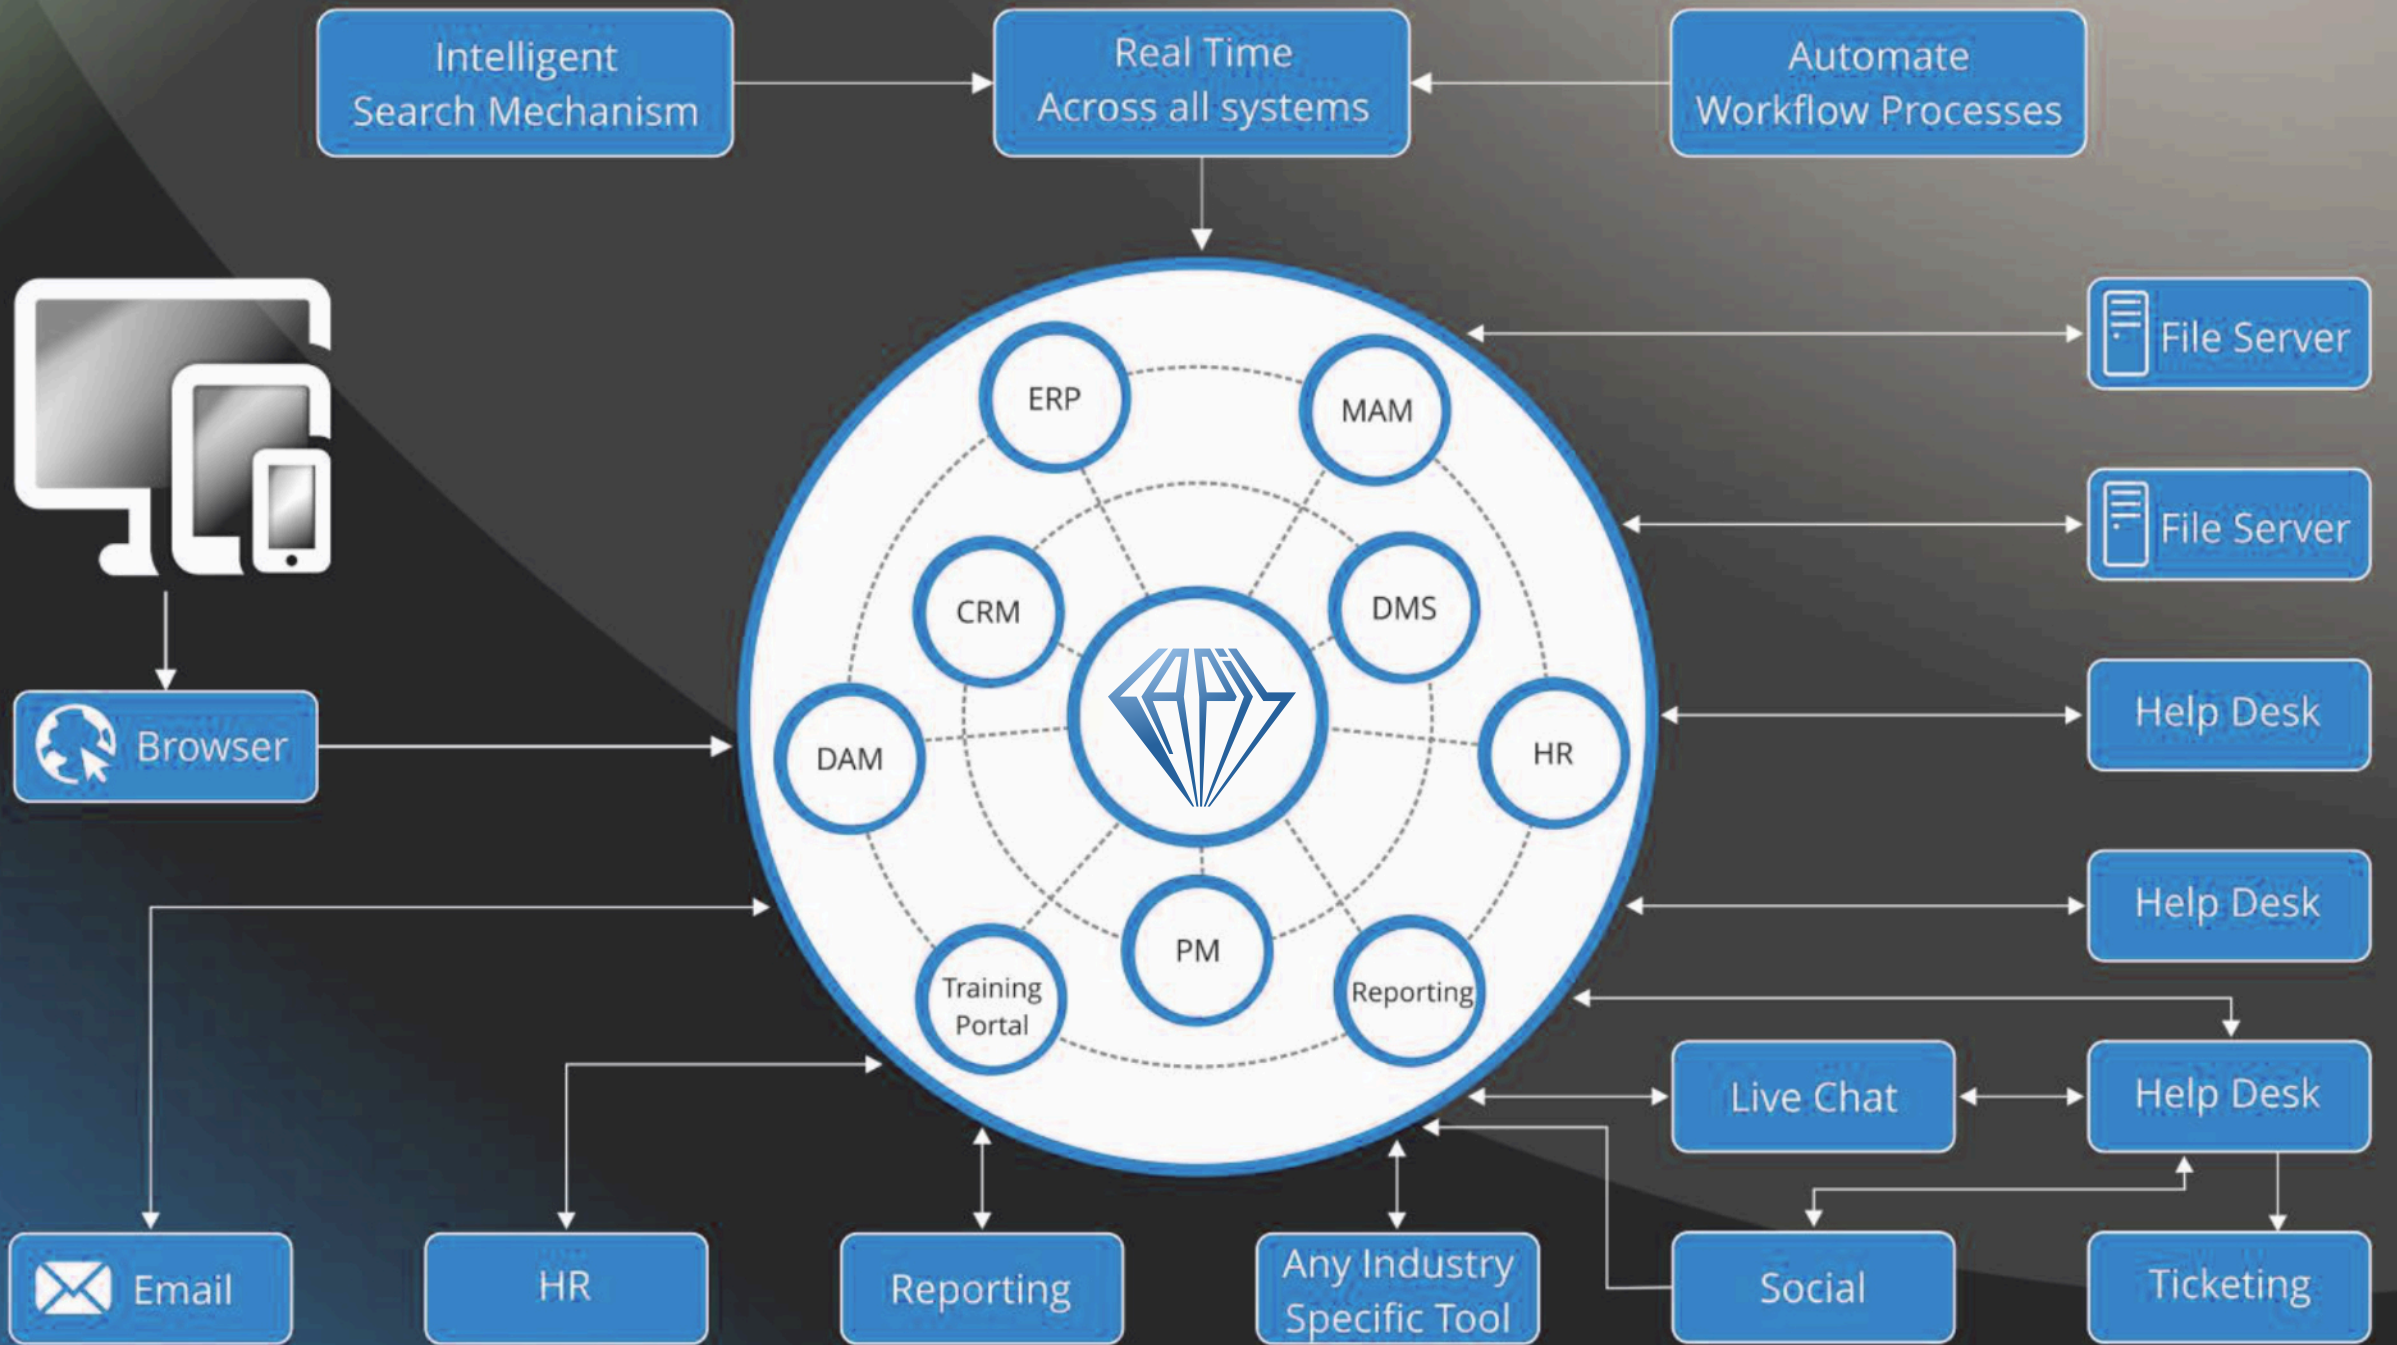

Keep accurate employees' profiles with personal data, labor contracts, professional skills, departments hierarchy, leaves, time-offs, time-shifts, expenses, allocations, seats, appraisals, managers' approvals.

Partner Network

Partner Network

Why join?

- ✓ Additional revenue streams
- ✓ Strengthen relationships with customers by offering wider portfolio of products and services
- ✓ Promote and sell your unique solutions

Partner Network

✓ Value Added Resellers (VAR)

✓ OEM Partners

✓ Resellers

Partner Network

Value Added Resellers (VAR)

- ✓ Installation and configuration
- ✓ Custom programming and functions extension
- ✓ Integrations with external systems
- ✓ Training
- ✓ Support

Partner Network

OEM Partnership

- Feature-rich solutions
- Out-of-the-box offerings
- Reduced complexity
- Security

Partner Network

Resellers

- New business opportunities
- Wide portfolio of high-end products and services
- No initial costs
- Revenue share
- Training and Support
